Microsoft Exchange 2000 Server solutions from hp

Endorsed by Microsoft® as a Worldwide Prime Integrator for Exchange 2000, HP supports Microsoft Exchange and Microsoft Windows® 2000 globally — with industry-leading server platforms, robust storage capabilities, wireless expertise, and full life-cycle services that accelerate the design and deployment of an agile, cost-effective messaging and collaboration solution.

consolidate hp ProLiant servers with Exchange 2000

In today's business environment, you need a messaging and collaboration solution built on a rock-solid, industry-standard platform -— one that ensures performance, reliability and scalability as well as improved cost of ownership. Recent studies indicate that consolidating servers and migrating to Windows 2000 and Exchange 2000 can significantly lower the total cost of ownership. By moving distributed departmental servers to consolidated enterprise servers, performance and availability are also enhanced. Optimized for peak performance in a Windows 2000 environment, ProLiant servers, from the new HP, for Exchange 2000 include:

• ProLiant DL servers designed for rack-mount environments

• ProLiant ML servers maximized for internal systems

ProLiant servers offer out-of-the-box support for Microsoft Exchange and .NET Web Services, as well as knowledge management, unified messaging and wireless solutions.

They are quick to deploy and easy to manage, thanks to advanced remote management tools such as the innovative HP Integrated Lights-Out Management capabilities. ProLiant servers are the development platform for Microsoft Windows 2000, Exchange 2000, SharePoint Portal Server, SQL Server and .NET.

save time with storage to spare

HP is the world's leading storage area network (SAN) provider for the Exchange environment. We were the first enterprise storage company to deliver SAN-based data replications, SAN-based snapshots and clones, switched SAN-WAN-SAN replication, and SAN-based storage virtualization for the Windows environment.

With the HP Rapid Restore for Exchange 2000 storage solution, you can dramatically reduce backup and restore time frames from hours to minutes, ensuring ongoing business operations and the highest levels of service for your customers, partners and employees.

see the big picture

A market-leading operations management solution, HP OpenView Operations for Windows provides a centralized point of direction for your enterprise, while providing efficient control of events happening across all your systems and business applications. With OpenView software, you'll be able to measure, monitor and troubleshoot across all components of your heterogeneous IT infrastructure — from network control to storage services and data protection, application and web services control. As a result, you can more effectively manage and maintain resources and service levels with lower costs.

go wireless

Today's on-the-go workforce demands fast, secure access to business data so that it can remain mobile and productive at the same time. Working closely with our partners, HP has developed planning, configuration and deployment guides for end-to-end Exchange wireless solutions. These solutions encompass the wired infrastructure, gateway, mobile telephony services and access devices. We support leading mobility products, such as Microsoft Mobile Information Server (MMIS) and Research in Motion (RIM) BlackBerry Enterprise Server Software for HP iPAQ handhelds. Pocket PC Phone mobile professionals can control information access with the AT+T Wireless WorkWare Starter Pack.

get the support you need every step of the way

HP Services offers a comprehensive yet flexible portfolio of life-cycle services for Exchange 2000. Our Exchange experts collaborate with your team to deliver services that include:

- business value and technical assessment
- planning and design for both pilot and production deployments
- migration, deployment and implementation
- outsourcing and managed services
- business continuity and high-availability services

put our Exchange experience to work for you

For more than 20 years, the HP and Microsoft Frontline Partnership has enabled us to share technology, engineering and marketing resources to create and promote value-added solutions based on industry-standard computing platforms.

Today, the HP Services team includes more than 23,000 Microsoft-trained specialists, 5,000 Microsoft-certified professionals and more than 850 dedicated Exchange experts. We are the largest integrator of Microsoft technologies, with more than 10 million Exchange seats deployed or under contract, including approximately 3 million Exchange 2000 seats. That's more than any other systems integrator — and a good reason why Microsoft has designated HP as Worldwide Prime Integrator for Exchange and, most recently, for .NET Web Services. HP is also Microsoft Gold Certified for enterprise systems and collaborative solutions.

When it comes to designing and deploying Microsoft Exchange 2000 Server solutions, no one can match the depth and breadth of experience HP brings to your business.
