Compaq Enterprise Information Systems Architecture

A comprehensive IS roadmap for the new millennium

An architected Information System from Compaq Services delivers clear solutions for your business needs

Would you try to upgrade your corporate headquarters without an architect? Then why tackle Enterprise Information Systems without one?

For sound investment decisions and timely implementations, you need an *Enterprise Information Systems Architecture*:

→ **Flexible and responsive**

→ **Provides a rational basis for investment decisions and investment protection**

→ **Reduces total costs**

→ **Ensures interoperation of data and applications**

→ **Yields faster deployment of new services**

→ **Affords a quality foundation for current and future projects**

Why develop an Enterprise Information Systems Architecture?

Speed, availability, cost, and responsiveness to business needs are crucial for Information Systems success. Many companies are developing new technology strategies: re-engineering the enterprise and deploying new distributed enterprise systems, groupware, and e-commerce extranets.

Compaq Services can provide your business with an *Enterprise Information Systems Architecture* that will serve as a roadmap to maximize your IS investment dollar and make your IS infrastructure responsive to business demands.

A carefully designed *Enterprise Information Systems Architecture* from Compaq Services provides:

→ *A technology strategy to support the enterprise*

→ *An Information System architecture to implement the technology*
