

## mobile solution from HP and Novell iFolder

Enhance the Novell iFolder with the ProLiant Sizer for iFolder from the new HP. Deploy the sizer to review your environment and obtain a complete configuration, including part numbers and product recommendations. The result is a total end-to-end solution with industry-leading ProLiant servers, StorageWorks SANs and iFolder software.

### reap the benefits

- security — encryption and immediate synchronization of data
- flexibility — access data files anywhere, on any computer
- acceleration — increase productivity with immediate access to your latest updated files
- replicated files — secured, updated files, stored and available in multiple locations
- equipment-free travel — travel without your laptop, with easy access to your files from any computer
- integrated solution — simplified integration with the tools and information you need
- expandability — room to grow with server and storage sizers and tools

## **solution**

- A comprehensive ProLiant sizing tool from the new HP takes the guesswork out of Novell iFolder deployment.

## **security**

- All files are encrypted during transport and on the server to protect them from unauthorized access.
- Automatically store files on servers and multiple workstations to guard against localized data loss.
- Corporate data assets on local PCs are now centrally hosted and backed up.

## **simplification**

- Update data across multiple workstations, automatically.
- Work while connected or disconnected, with automatic synchronization of file changes.
- Access files through the same directory structure and folder metaphor that you're already familiar with, no matter what you're using.
- iFolder eliminates complex login or VPN procedures — Internet access is all you need.
- Planning, deployment and operation of an iFolder installation is easy with SmartStart software and Insight Manager.

## **acceleration**

- Provide automatic, secure and transparent synchronization of files between hard drives and an iFolder server — allowing easy access to personal files from anywhere, anytime.
- Take advantage of Internet standards to make file access and management part of your overall e-business strategy.
- Eliminate the need to perform a manual data file update to a PC before leaving the office.
- Avoid the expenses of a traditional WAN.
- Keep bandwidth usage to a minimum by transmitting only the changes to a file — not the entire file.
- Smart Array controllers and StorageWorks products are well-known in the industry for consistently breaking all speed barriers, providing the fastest possible access to your data.

Now your files can be as mobile as you are — at work, at home or on the go. Novell iFolder lets you access, organize and manage your files from anywhere, anytime. iFolder also provides worry-free security, ensuring that all your files are always safe, secure and up-to-date.
