## Managing your knowledge

Today's businesses run on electronic information. While e-data brings compelling benefits to your organization, skyrocketing volumes of electronic information — especially e-mail messages — can cause management challenges. Your solution is Enterprise Vault from kVault Software Inc. (KVS).

The information contained within your Microsoft Exchange, SharePoint or .NET system is a major part of your intellectual property. With the flagship product, Enterprise Vault for Exchange, you can use this asset more efficiently and effectively by managing the archiving, retention and retrieval of documents and e-mail.

### **Provides lifetime management of e-mail**

By automatically managing the entire life-cycle of every e-mail message, Enterprise Vault protects your knowledge assets. Messages move from the users' mailboxes to secure online Vault stores, where they are kept safe for future needs based on corporate-defined policies.

### **Optimizes Exchange message stores**

By automatically controlling mailbox growth, Enterprise Vault reduces the time users and administrators spend battling with bloated message stores. Exchange can focus on the dynamic handling of newer information, while Enterprise Vault acts as a high-scale, long-term repository for older information. Users have apparently unlimited mailboxes — but without the associated cost and management issues. As a result, you can support more Exchange users per server.

*Enterprise Vault for Exchange product benefits:*

- > Automates the archiving of older mail to more cost-effective online stores
- > Removes the mailbox housekeeping load from users and administrators
- > Reduces the time it takes to recover old or "lost" e-mail from days to seconds
- > Optimizes content management and adherence to legal requirements
- > Enables significantly improved service levels for Exchange recovery

### Eliminates PSTs

Enterprise Vault lets you stop using Personal Storage (PST) files as e-mail archives. Items in existing PSTs can be imported into Enterprise Vault, which shrinks the overall storage requirement and increases information protection. You can then delete the original PSTs.

### Reduces message retrieval and administrative support costs

Enhancing Exchange with Enterprise Vault saves the time and money spent retrieving and recovering old or "lost" e-mail because with the Vault, a message is never lost. Users and administrators can search for and retrieve messages from the Vault in an instant.

### Retains legal records

Enterprise Vault provides a highly efficient, secure solution for organizations required by law or corporate policy to retain electronic information and to allow it to be searched and selectively retrieved for audit purposes. Storage locations, retention periods and ultimate deletions are all controlled by policy.

### Meet the rest of the family
