

Intelligent Manageability

Compaq Management Pack for MOM

Extending Operations Management

The Compaq Management Pack for Microsoft Operations Manager (MOM) integrates event monitoring and alert processing for Compaq ProLiant servers into MOM.

Developed in partnership with NetIQ, this entry-level integration builds upon the core elements of Compaq Insight Management to complement and extend MOM, and maximize existing IT investments.

Compaq customers that implement MOM for enterprise-class event and performance monitoring can use the Compaq Management Pack to streamline IT administration and increase systems availability.

This new Compaq integration includes predefined scripts to automatically identify Compaq ProLiant servers, and an extensive collection of monitors and rules that provide early notification and automated responses to potential problems through the MOM Administrator Console.

Comprehensive knowledge base data aids in problem analysis and time to resolution, and over 600 rules include event forwarding definitions that enable administrators to take prompt corrective or preventive action, reducing unnecessary down time.

The Compaq Management Pack also includes performance monitors to measure the resource usage and availability of Compaq Management Agents, as well as threshold and pre-failure notifications for critical hardware subsystems.

NetIQ has also developed an XMP™ (Extended Management Pack) that extends the Compaq Management Pack and MOM with advanced functionality.

Compaq Insight Management tools and NetIQ XMP™ solutions combine to provide the most complete server life-cycle and operations management solution for the Windows 2000 platform.

Delivering enterprise-class solutions through premier partnership

Compaq and NetIQ have established a premier partnership to develop enterprise-class solutions for Microsoft Operations Manager 2000.

This unique partnership offers customers an industry leading solution for managing the life-cycle of Compaq ProLiant servers and the performance and availability of Windows based resources.

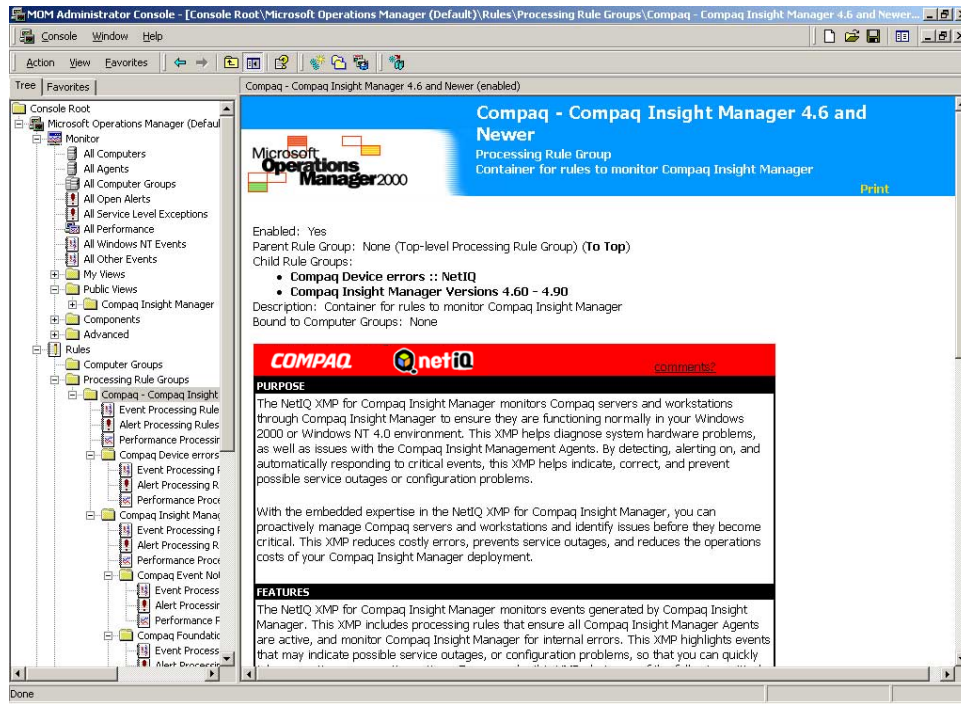

Benefits at a Glance

Compaq Management Pack for Microsoft Operations Manager v1.0 delivers the following benefits:

- > Complements and extends Microsoft Operations Manager 2000*
- > Brings the benefits of Compaq Insight Management to MOM*
- > Streamlines IT administration and increases systems availability*

Availability

Compaq Management Pack for MOM is scheduled for release in late November 2001. To pre-register and have the software emailed to you when available, visit www.compaq.com/manage/integration

Compaq Management Pack for Microsoft Operations Manager v1.0

Product Features

- > Entry-level integration with Microsoft Operations Manager 2000 v1.0
- > Scripted installation:
 - Creates a MOM computer group for Compaq servers
 - Copies Compaq rules, views and scripts to the MOM SQL database
- > Compaq ProLiant servers automatically identified and listed in the Compaq computer group for MOM
- > Compaq events viewed in the MOM Administrator Console or Web Console
- > Monitors Windows Event Log entries generated by Compaq Management Agents and services
- > Supports Compaq Management Agents v4.6 and greater
- > Over 600 monitors and alert processing rules for Compaq ProLiant servers running Microsoft Windows 2000 or NT version 4.0
- > Event monitors include:
 - Server health
 - Environmental conditions
 - Security access violations
 - Drive array and cluster status
 - Pre-failure indicators for hard drives, processors and memory subsystems
- > Pre-defined rules forward Compaq alarms to MOM Hardware Support groups
- > Detailed knowledgebase data enables accurate event analysis and fast system recovery
- > Performance rules monitor Compaq Management Agent availability and resource usage
- > Pre-defined Compaq rules can be customized to suit individual requirements
- > Easy installation with comprehensive user documentation
- > Provides the foundation for advanced operations and server life-cycle management with NetIQ XMP™ solutions
