

hp ProLiant servers and PeopleSoft

"The ProLiant server from the new HP has an exceptionally high-speed architecture, which optimizes the database performance of our PeopleSoft applications."

Jim Prevo, Chief Information Officer
Green Mountain Coffee Roasters

PeopleSoft®

proven real-time enterprise solutions

real-time enterprise experience – hp ProLiant servers and PeopleSoft

HP brings you a greater level of competitive advantage for PeopleSoft Enterprise Solutions. How? By combining over 10 years of PeopleSoft experience with powerful industry standard HP ProLiant servers. Together, HP and PeopleSoft deliver a proven solution that allows companies to experience greater innovation throughout their organizations and supply chains. HP and PeopleSoft are committed to helping you exploit the power of the Internet, allowing you to conduct your business faster, simpler, and with less risk. PeopleSoft applications on HP ProLiant servers give you the power to take advantage of proven enterprise solutions available on a cost-effective, reliable, and scalable enterprise platform.

adapting to your needs

In the Internet-based, global economy, nothing stays the same for long. Business models are constantly changing, putting more pressure on resources. At the same time, you need to meet your customer's increasing expectations. How do you keep pace? By choosing HP as your enterprise partner. We have created an Adaptive Infrastructure that delivers industry defining ProLiant technologies enabling your business to adapt to change with ease. With over 1,000 joint customers, we have the experience to help you plan, manage and deploy the technology foundation needed to support business critical application deployments. Exploiting technologies to help you create the real-time enterprise needed to compete in today's business environment. The ability to adapt means you never get left behind.

there's no better choice for PeopleSoft than hp

Nobody knows PeopleSoft like we do. For customers who choose an industry standard environment, HP ProLiant servers command more than a 50% server market share. We must be doing something right. Our joint solutions are built on years of successful enterprise deployments. With the world's best engineering resources behind them, the HP ProLiant family is the optimum choice for your PeopleSoft solution.

hp ProLiant servers:

- Built with quality server components
- High availability
- Enriched performance through innovative engineering
- Designed for the Internet age

HP also provides exclusive software solutions such as HP Insight Manager to further optimize reliability and performance. Insight Manager helps maximize system uptime and performance and reduces the cost of maintaining the IT infrastructure by providing proactive notification of problems before those problems result in costly downtime and reduced productivity.

hp Insight Manager benefits:

- Fast and easy to use
- Up and running in minutes
- View the status of 100 plus servers with no scrolling
- Query and task systems provide the power to customize Insight Manager operations to your particular management needs
- Scalable up to 5,000 devices and 50,000 events
- Web-based for virtual presence – manage from anywhere via Microsoft Internet Explorer

in addition to HP Insight Manager, every ProLiant server comes with:

- *HP SmartStart* – an intelligent tool for setting up your HP server for optimized performance
- *HP Support PAQ* – an HP system software baseline that makes deploying updates to servers throughout the environment quick and easy

optional software packages for ProLiant servers include:

- *Rapid Deployment Pack* – automates resource intensive deployment processes
- *Workload Management Pack* – enables monitoring and partitioning of applications to discrete resources on the server
- *Integrated Lights-Out Advanced Pack* – an advanced functionality upgrade for servers with integrated Lights-Out processors on board

industry leading performance

HP is the undisputed leader in overall Windows 2000-based server sales. In fact, we are the market leader in the number of all Microsoft Windows 2000-based servers deployed worldwide. HP has more experience with Microsoft technology than any other vendor. The tuning and testing that goes into our solutions delivers the highest price/performance in the business, faster ROI and lower total costs. HP ProLiant servers consistently deliver industry-leading PeopleSoft benchmarks for Windows 2000. The strategic HP and Microsoft Alliance is committed to creating a superior combination of products and services optimized to deliver the best IT and Internet solutions. As a long-term Joint Development Partner with Microsoft, over 20 years of mission-critical, enterprise-wide computing experience and in-depth technical expertise, HP can help you invent, build, run and evolve integrated and complete solutions for your computing environments.

alliance solutions center – focused on PeopleSoft and ProLiant solutions

Focused on PeopleSoft and ProLiant solutions HP invests extensive manpower and resources in improving your PeopleSoft experience. To reduce your risks and enhance reliability, we have a worldwide team of engineering and customer relationship personnel dedicated to proving and optimizing PeopleSoft solutions on ProLiant servers. Our HP and PeopleSoft Alliance Solution Center provides a direct source of technological expertise for seamless integration, unparalleled reliability and proven performance.

the alliance solutions center advantage:

- Solution characterization expertise to understand sizing and configuration requirements
- Develops expertise in areas such as high availability, clustering, back-up restore
- ...all to help you build the real-time enterprise

find the right answer, right now

ActiveAnswers for PeopleSoft applications is an online knowledge repository and virtual solutions community where you'll find a dynamic set of tools, forums and information to help you plan, design and implement your PeopleSoft solution on HP ProLiant servers. ActiveAnswers significantly reduces the time and resources needed to implement and operate your PeopleSoft solution by delivering:

- Sizing and configuration tools
- Proven installation methodologies and white papers
- High availability backup and management information
