About This Guide

This guide describes how to use the Novell® Client™ for Linux features available in the Novell Client tray application. This guide contains the following sections:

- [Chapter 1, “Using the Novell Client Tray Application,” on page 9](#)
- [Chapter 2, “Using Novell Utilities,” on page 15](#)
- [Appendix A, “Documentation Updates,” on page 23](#)

Audience

This guide is intended for users of the Novell Client for Linux.

Feedback

We want to hear your comments and suggestions about this manual and the other documentation included with this product. Please use the User Comments feature at the bottom of each page of the online documentation, or go to www.novell.com/documentation/feedback.html and enter your comments there.

Documentation Updates

For the latest version of this documentation, see the [Novell Client online documentation \(http://www.novell.com/documentation/linux_client/index.html\)](http://www.novell.com/documentation/linux_client/index.html).

Additional Documentation

For documentation on installing and administering Novell Client for Linux, see the *Novell Client 1.1 for Linux Installation and Administration Guide*.

For documentation on known issues, see the *Novell Client for Linux Readme*.

For documentation on login scripts, see the *Novell Login Scripts Guide*.

Documentation Conventions

In this documentation, a greater-than symbol (>) is used to separate actions within a step and items within a cross-reference path.

A trademark symbol (®, ™, etc.) denotes a Novell trademark. An asterisk (*) denotes a third-party trademark.

Using the Novell Client Tray Application

1

The Novell® Client™ for Linux workstation software extends the capabilities of Linux* desktops by providing access to NetWare® and Open Enterprise Server (OES). When installed on workstations, the Client lets you enjoy the full range of Novell services such as authentication via Novell's eDirectory™, network browsing and service resolution, and secure and reliable file system access. The Client supports Novell's traditional NCP™ protocol.

Novell Client for Linux 1.1 supports workstations running Novell Linux Desktop (NLD) 9 SP3.

For information on installing the Novell Client for Linux, see the *Novell Client 1.1 for Linux Installation and Administration Guide*.

This section contains the following information:

- Section 1.1, "Starting and Stopping the Novell Client Tray Application," on page 9
- Section 1.2, "Logging In to the Network," on page 10
- Section 1.3, "Logging Out of a Network Location (Server or Tree)," on page 11
- Section 1.4, "Viewing Your Network Connections," on page 11
- Section 1.5, "Changing Your Network Password," on page 12
- Section 1.6, "Mapping Network Directories," on page 12
- Section 1.7, "Disconnecting a Mapped Directory," on page 13
- Section 1.8, "Changing the Location of the Novell Client Tray Application," on page 13
- Section 1.9, "Configuring the Novell Client," on page 13
- Section 1.10, "Viewing Novell Client Version Information," on page 14

1.1 Starting and Stopping the Novell Client Tray Application

You can use the Novell Client tray application to access many of the Novell Client for Linux features. Simply click the red N icon () located either in the tray or in the floating window. The location of this icon is based on your workstation and your preferences, and it can be changed using the Novell Client Options menu. See Section 1.8, "Changing the Location of the Novell Client Tray Application," on page 13 for more information.

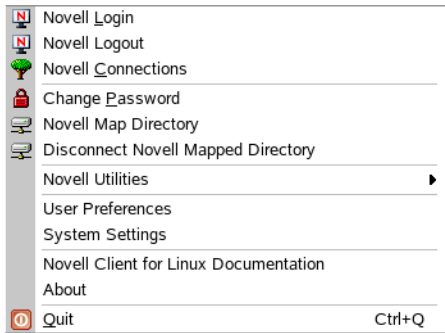

Click  to see the following menu:

Figure 1-1 The Novell Client Tray Application Menu

If you want to stop the Novell Client tray application from appearing on the tray, click  > *Quit*.

To restart the Novell Client tray application (or if for some reason the red N icon () does not appear in your tray or float window), use one of the following methods:

- **NLD GNOME:** Click *Programs > Accessories > Novell Tray*.
- **NLD KDE:** Click the menu button > *Applications > Novell Tray*.
- Enter the following command in a terminal window:

```
/opt/novell/ncl/bin/ncl_tray
```

1.2 Logging In to the Network

When you log in to the network, you gain access to directories and files as well as other services provided by network servers. Your network administrator should provide you with the required information so that you can log in.

1 Use one of the following methods to open the Novell Login dialog box:

- Click  > *Novell Login*.
- **NLD GNOME:** Click *Programs > Accessories > Novell Login*.
- **NLD KDE:** Click the menu button > *Applications > Novell Login*.

2 Enter your username and password, then click *Advanced*.

3 Specify the tree, context, and server information for the server you want to connect to.

You can type a DNS name or an IP address for the server. See your network administrator for this information.

If your network has SLP set up, you can browse a list of available trees, contexts, and servers by clicking their associated buttons.

4 (Optional) To clear any existing connections to servers before logging in, select *Clear current connections*.

5 (Optional) To run login scripts during this login session, click the *Script* tab, then select the options needed to run the login scripts.

For more information on login scripts, see [Section 1.2.1, “Running Novell Login Scripts during Login,” on page 11](#).

6 Click *OK* to log in to the server specified in [Step 3](#).

1.2.1 Running Novell Login Scripts during Login

When you successfully log in to the network, one or more login scripts are executed. Login scripts can be used to automatically map drives and search drives to directories, display messages, set environment variables, and execute programs or menus.

You can specify whether login scripts are run, whether the results are displayed, and whether the login window is automatically closed during login. In addition, if the login script uses the **%2, %3, %4, or %5 variable**, you can set these variables by clicking the *Variables* button.

Your network administrator should provide information on whether to use login scripts and, if so, which login scripts to use.

For additional information on setting up login scripts, see the *Novell Login Scripts Guide*.

1.3 Logging Out of a Network Location (Server or Tree)

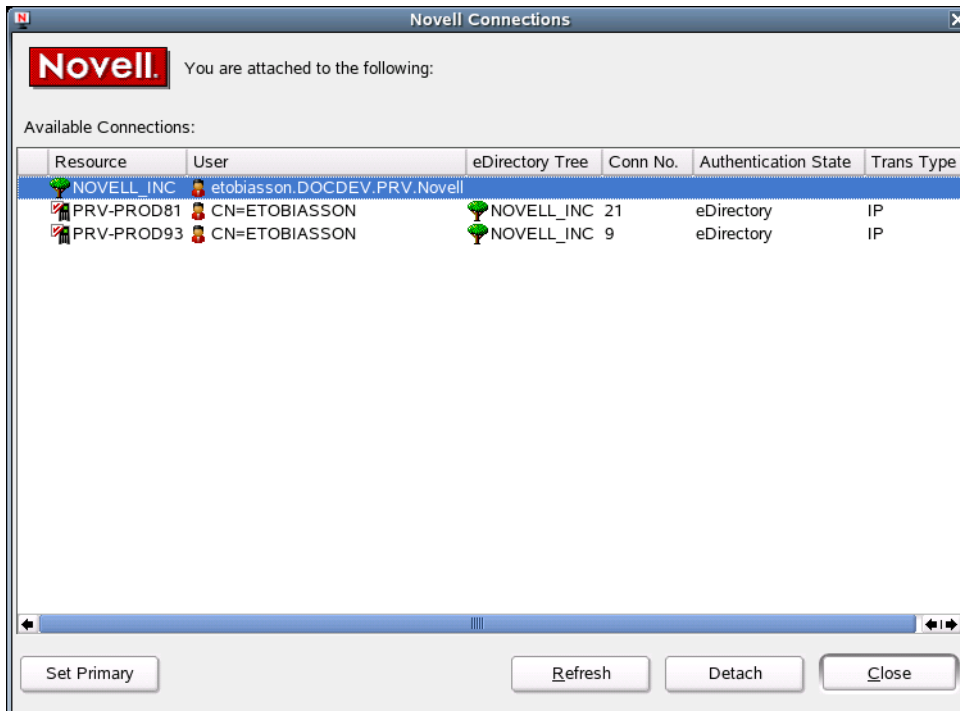

You can log out of a network location in either of the following ways:

- To log out of all existing connections, click  > *Novell Logout* > *Logout*.
- If you are logged in to multiple trees and want to log out of a specific server or tree, click  > *Novell Connections*, select the tree or server that you want to log out of, then click *Detach*.

1.4 Viewing Your Network Connections

Novell Connections allows you to see what servers and trees you are logged in to. You can refresh connections, set a specific tree as your primary connection, or log out of a tree or server.

- 1 Click  > *Novell Connections*.

2 Do any of the following:

- **To set a connection as the primary connection:** Select the server you want to set as the primary connection, then click *Set As Primary*.
- **To refresh a connection:** Select the connection that you want to refresh, then click *Refresh*.
- **To disconnect from a connection:** Select the connection you want to detach from, then click *Detach*.

3 Click *Close*.

1.5 Changing Your Network Password

To change your eDirectory password:

- 1 Click  > *Change Password*.
- 2 Type your current password in the *Old Password* field.
- 3 Type your new password in the *New Password* field.
- 4 Retype the new password in the *Confirm Password* field.
- 5 Click *OK*.

1.6 Mapping Network Directories

When you map a directory, you create a symbolic link or shortcut to a path on the network and assign it a name and location on your workstation. After the drive is mapped, you can use the symbolic link to access the network resource, if you have sufficient rights on that resource. You can map to a specific folder on the resource or to the root of the resource.

- 1 Click  > *Novell Map Directory*.

- 2 Specify the path on the local file system where the symbolic link to the network resource is to be created (using forward slashes).

For example: `/home/bsmith`

You can also click the *Browse* button and select the location on the local file system where the symbolic link is to be created.

If no location is specified, the symbolic link is created in the *Map Link Default Location* configured in the *System Settings* or in your home directory.

- 3 Type the name of the symbolic link to be created, or select a letter from the drop-down list (if you want to use a single letter as the name for the link).
- 4 In the *Novell File System* field, type the server name and the path to the directory you want to map.

The path can be in any of the following forms:

- `//server/volume/path`
 - `server/volume:`
 - `server/volume:/path`
 - `.directory_object_name.fully_distinguished_eDirectory_path` (such as a cluster volume, for example: `my_dir.usrs.accnt.mycompany`)

You can also click the *Browse* button and locate the directory you want to map.

- 5 Click *Map*.

The mapped drive appears in your home directory (by default) or in the directory you specified in [Step 2](#).

1.7 Disconnecting a Mapped Directory

- 1 Click  > *Disconnect Novell Mapped Directory*.
- 2 Select the mapped directory that you want to disconnect from, then click *Disconnect*.

1.8 Changing the Location of the Novell Client Tray Application

Use the User Preferences dialog box to change the location of the Novell Client tray application. This is useful if your workstation has problems with tray icon support. If you are unable to see the tray icon under the Windows Manager, you can select the Use Float Window option to create a floating icon () that can be used to access the Novell Client tray application features.

- 1 Click  > *User Preferences*.
- 2 Select the location you want for the Novell Client tray application.
- 3 Click *OK*.

1.9 Configuring the Novell Client

To configure the Novell Client, run the Novell Client Configuration Wizard. It lets you configure file browser, protocol, login, tray application, and OpenSLP settings.

- 1 Click  > *System Settings*.
- 2 If you are not logged in as root, type the root password, then click *OK*.
- 3 Select the Client settings you want to configure, then click *Start Wizard*.
- 4 Follow the instructions in the left panel to configure the Novell Client settings.

- 5 When you are finished, click *Finish*.
- 6 (Conditional) If you made changes to the Protocol Settings page or the Service Location Protocol (OpenSLP) Settings page, reboot the machine for those changes to take effect.

For more information, see “[Using the Novell Client Configuration Wizard](#)” in the *Novell Client for Linux Installation and Administration Guide*.

1.10 Viewing Novell Client Version Information

To obtain version information for the Novell Client in the Novell Client tray application, click *About*. This window also contains information on the specific packages loaded, including their status, version, and release information.

You can also link to the [Novell Client for Linux product page \(http://www.novell.com/products/clients/linux/overview.html\)](http://www.novell.com/products/clients/linux/overview.html) from the About dialog box.

- 1 Click  > *About*.
- 2 Click the *Packages* tab to view information on the Novell Client for Linux packages loaded, including status, version, and release information.
- 3 Click the *Kernel* tab to view information on the kernel and novfs.
- 4 Click *OK*.

Using Novell Utilities

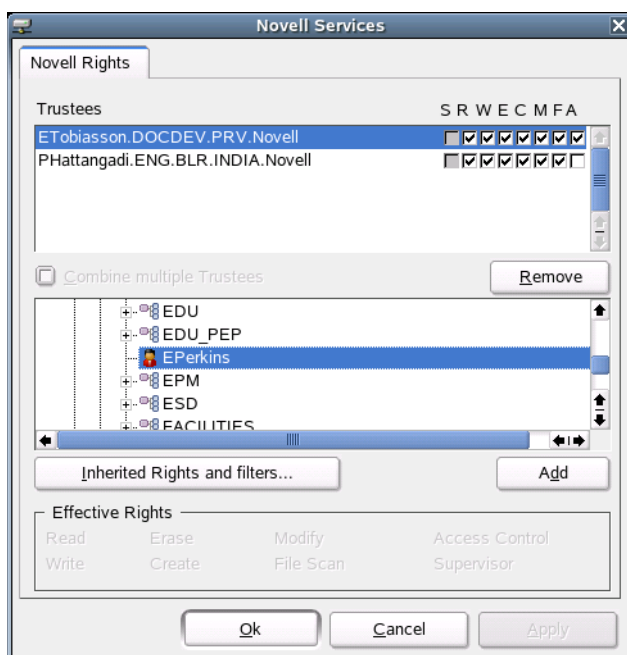

You can access various Novell® utilities by selecting the Novell Utilities option on the Novell Client™ tray application menu. The options on the submenu let you do the following:

- Section 2.1, “Assigning Rights to Volumes, Files, and Directories,” on page 15
- Section 2.2, “Setting Inherited Rights and Filters,” on page 16
- Section 2.3, “Viewing Object Properties,” on page 18
- Section 2.4, “Salvaging Deleted Files,” on page 19
- Section 2.5, “Purging Deleted Files,” on page 20
- Section 2.6, “Sending Messages to Users,” on page 21
- Section 2.7, “Sending Messages to the System Console,” on page 22

2.1 Assigning Rights to Volumes, Files, and Directories

The Trustee Rights utility lets you display and give rights to volumes, files, and directories on a Novell server. A trustee is an object (such as a User object, Group object, Organizational Role objects, or container object) that has (or will have) rights to a volume, directory, or file. Trustee assignments allow you to assign ownership, set permissions, and monitor user access. You must have the [Access Control \(http://www.novell.com/documentation/nw65/nss_enu/data/bri5796.html#bs3fjo7\)](http://www.novell.com/documentation/nw65/nss_enu/data/bri5796.html#bs3fjo7) right to change trustee assignments.

- 1 Click  > *Novell Utilities* > *Trustee Rights*.
- 2 Select the folder or file you want to set trustee rights for, then click *OK*.

- 3 To add a trustee, select the object in the tree diagram, click *Add*, then set the rights for this user by selecting the boxes under the letters on the right.

For each trustee in the list, there is a set of eight check boxes, one for each right that can be assigned. If a check box is selected, the trustee has that right. To assign or unassign rights, use the check boxes in the dialog box.

The following rights can be set for each trustee:

- **Read:** For a directory, grants the right to open files in the directory and read the contents or run the programs. For a file, grants the right to open and read the file.
 - **Write:** For a directory, grants the right to open and change the contents of files in the directory. For a file, grants the right to open and write to the file.
 - **Erase:** Grants the right to delete the directory or file.
 - **Create:** For a directory, grants the right to create new files and directories in the directory. For a file, grants the right to create a file and to salvage a file after it has been deleted.
 - **Modify:** Grants the right to change the attributes or name of the directory or file, but does not grant the right to change its contents (changing the contents requires the Write right).
 - **File Scan:** Grants the right to view directory and file names in the file system structure, including the directory structure from that file to the root directory.
 - **Access Control:** Grants the right to add and remove trustees for directories and files and modify their trustee assignments and Inherited Rights Filters.
 - **Supervisor:** Grants all rights to the directory or file and any subordinate items. The Supervisor right can't be blocked by an Inherited Rights Filter. Users with this right can grant or deny other users rights to the directory or file.
- 4 To remove a trustee, select one or more trustees in the Trustees list, then click *Remove*.
 - 5 To view a list of rights and filters inherited by this volume, click *Inherited Rights and Filters*.
 - 6 To apply the same trustee assignments to a group of selected files, click *Combine Multiple Trustees*.

This check box is available only if you're viewing the right for multiple files or directories. At least one of the files or directories must have at least one trustee assignment. The trustees and rights shown are the combined trustees and rights for all of the files. If you select *Combine Multiple Trustees*, the trustee assignments that are chosen apply to all of the selected files after you click *OK* or *Apply*.

For example, Kim is a trustee of `file_a` and `file_b`. Kim has Read, File Scan, and Access Control rights for `file_a` and Read and File Scan rights for `file_b`. If you select `file_a` and `file_b` and view their properties, Kim is shown as a trustee with Read, File Scan, and Access Control rights.

If you select *Combine Multiple Trustees* and then click *OK*, Kim is given the Access Control right for `file_b`. Therefore, Kim now has Read, File Scan, and Access Control rights for both `file_a` and `file_b`.

- 7 Click *Apply*, then click *OK* when you are finished modifying trustee rights.

2.2 Setting Inherited Rights and Filters

The Inherited Rights and Filters utility lets you view and set information about trustees and rights. Rights assignments on eDirectory™ containers can be inheritable or non-inheritable, but all rights assignments on directories are inheritable. You can block such inheritance on individual subordinate

items so that the rights aren't effective on those items, no matter who the trustee is. One exception is that the Supervisor right can't be blocked.

- 1 Click  > *Novell Utilities* > *Inherited Rights and Filters*.
- 2 Select the folder or file you want to view or set inherited rights and filters for, then click *OK*.

The main part of this dialog box is the list of trustees inherited from the selected item and its parent folders.

- 3 To assign or unassign rights, use the check boxes to the right of a trustee.

For each trustee in the list, there is a set of eight check boxes, one for each right that can be inherited. If a check box is selected, the trustee has that right.

The following rights can be set for each trustee:

- **Read:** For a directory, grants the right to open files in the directory and read the contents or run the programs. For a file, grants the right to open and read the file.
- **Write:** For a directory, grants the right to open and change the contents of files in the directory. For a file, grants the right to open and write to the file.
- **Erase:** Grants the right to delete the directory or file.
- **Create:** For a directory, grants the right to create new files and directories in the directory. For a file, grants the right to create a file and to salvage a file after it has been deleted.
- **Modify:** Grants the right to change the attributes or name of the directory or file, but does not grant the right to change its contents (changing the contents requires the Write right).
- **File Scan:** Grants the right to view directory and file names in the file system structure, including the directory structure from that file to the root directory.
- **Access Control:** Grants the right to add and remove trustees for directories and files and modify their trustee assignments and Inherited Rights Filters.
- **Supervisor:** Grants all rights to the directory or file and any subordinate items. The Supervisor right can't be blocked by an Inherited Rights Filter. Users with this right can grant or deny other users rights to the directory or file.

- 4 To see a list of trustees for subfolders of the currently selected folder, click *View Trustees Below Directory*.

A list of all the users and their rights to each subfolder appears. You can modify or remove rights from this list.

- 5 To view a trustee's current effective rights (taking into account the Inheritance filter), right-click a trustee name, then click *Current Effective Rights*.

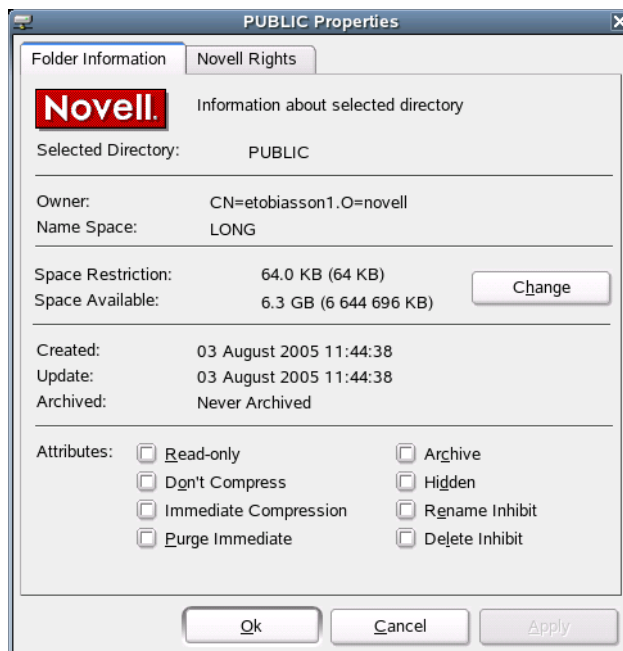

Users can receive rights in a number of ways, such as explicit trustee assignments, inheritance, and security equivalence. Rights can also be limited by Inherited Rights Filters and changed or revoked by lower trustee assignments. The net result of all these actions (the rights a user can employ) are called effective rights.

- 6 To view a trustee's properties (such as if they have the rights to modify inherited rights at this level), right-click a trustee name, then click *Properties*.
- 7 Click *Apply*, then click *OK* when you are finished modifying inherited rights and filters.

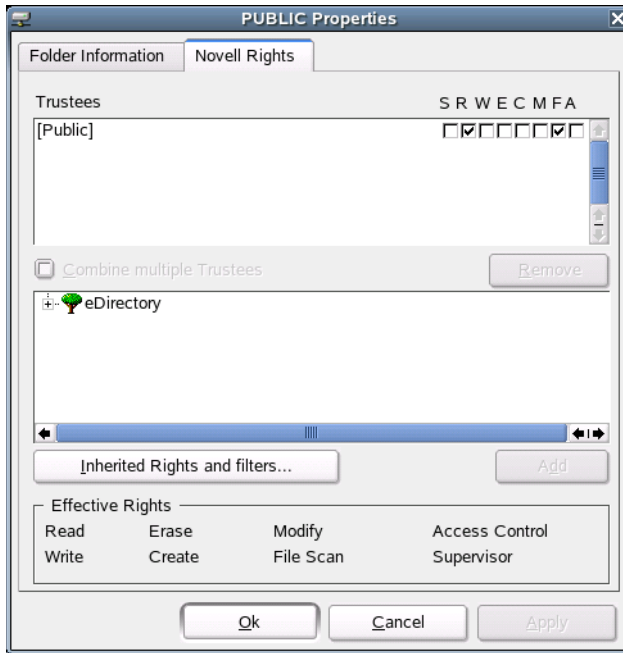

2.3 Viewing Object Properties

The Object Properties utility lets you view the property pages (*Folder Information* and *Novell Rights*) for a selected object. The property pages let you see information and statistics about that object. If you have sufficient rights, you can set attributes for that object.

- 1 Click  > *Novell Utilities* > *Object Properties*.
- 2 Select the object you want to see the properties for, then click *OK*.
- 3 On the *Folder Information* page, you can view the owner of the folder, the name spaces enabled on the folder, the amount of disk space available to you, the date the folder was created, updated, and archived, and any attributes set on the folder.

- 4 If you have rights to modify this object and need to make changes, select the properties you want to changed.
- 5 To view the eDirectory rights associated with this object, click the *Novell Rights* tab.

If you have Access Control rights and need to make changes to the Novell rights associated with this object, see “[Managing File Security](#)” in the *Novell Client 1.1 for Linux Installation and Administration Guide* for specific steps on setting Novell file rights.

If you do not have Access Control rights, your effective rights to the file appear in the *Effective Rights* box. You cannot change these rights.

- 6 Click *Apply*, then click *OK* when you are finished viewing or modifying the object’s properties.

2.4 Salvaging Deleted Files

The Salvage utility lets you recover deleted files and directories from Novell file systems. Files that have been purged cannot be recovered.

IMPORTANT: You cannot salvage files or directories from an OES for Linux Reiser volume.

- 1 Click  > *Novell Utilities* > *Salvage Deleted Files*.
- 2 Select the folder where the files you want to recover are located, then click *OK*.

3 Select the files you want to recover.

To display files with 0 bytes, deselect *Do Not Show 0 Size Files* (selected by default). This refreshes the display to show all deleted files, no matter the size.

4 Click *Salvage File*.

To salvage all deleted files in the folder, click *Salvage All*.

5 Click *Close*.

2.5 Purging Deleted Files

The Purge utility lets you purge deleted files and directories from Novell file systems. Deleted files are purged from a volume when one of the following events occurs:

- The Purge Delay setting times out. Deleted files are purged automatically.
- The server starts purging files if a volume starts to fill up; the oldest files that have been deleted are automatically purged.
- If you do not want a file to be restored after deletion, you can enable the Immediate Purge of Deleted Files parameter. The file is deleted and purged immediately.
- You manually purge the deleted files.

WARNING: The Purge utility permanently removes deleted files from the selected directory. Purged files cannot be recovered with the Salvage utility.

IMPORTANT: You cannot purge deleted files or directories from an OES for Linux Reiser volume.

1 Click  > *Novell Utilities* > *Purge Deleted Files*.

- 2 Select the folder where the files you want to purge are located, then click *OK*.

- 3 Select the files you want to purge

To display files with 0 bytes, deselect *Do Not Show 0 Size Files* (selected by default). This refreshes the display to show all deleted files, no matter the size.

- 4 Click *Purge File*.

To purge all deleted files in the folder, click *Purge All*. To purge subdirectories, click *Purge Subdirectories*.

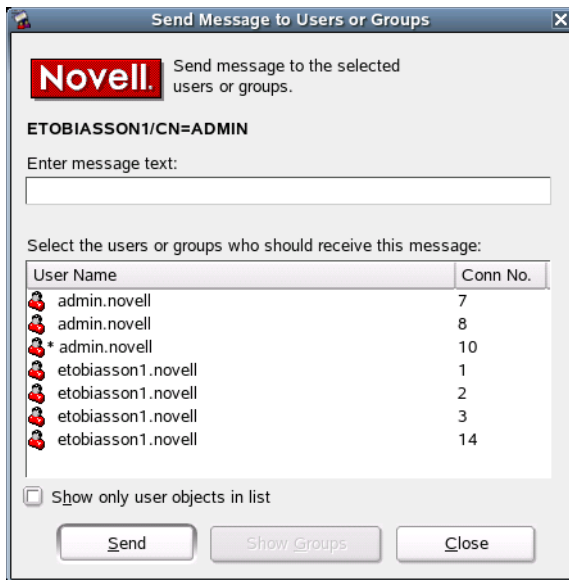

- 5 Click *Close*.

2.6 Sending Messages to Users

Use the Send Message to User utility to send a simple message to users on the network. You can send the message to a single user or group or to multiple users or multiple groups of users. The message appears on the receiver's screen in a Message Popup dialog box. On your screen, the Send Message Results dialog box shows the results. Only users who are logged in at the time you send the message receive the message.

IMPORTANT: This feature is not fully functional. You can send messages from a Linux workstation, but they can only be received by Windows* workstations.

- 1 Click  > *Novell Utilities* > *Send Message to User*.
- 2 Select a server to see a list of users and groups on that server, then click *Select*.

- 3 Type the message you want to send in the *Enter Message Text* field.
- 4 Select the users or groups that you want to receive the message.
- 5 Click *Send*.

The Send Message Results dialog box shows which users or groups the message was sent to.

- 6 Click *OK*, then click *Close*.

2.7 Sending Messages to the System Console

Use the Send Message to System Console utility to send messages to a server system console.

IMPORTANT: This feature is not fully functional in this release.

- 1 Click  > *Novell Utilities* > *Send Message to System Console*.
- 2 Select a server, then click *Select*.

- 3 Type the message you want to send in the *Enter Message Text* field.
- 4 Click *Send*, then click *OK*.

Documentation Updates

A

This section contains information on documentation content changes made in this guide since the initial release of the Novell® Client™ for Linux. The information will help you keep current on updates to the documentation.

The documentation was updated on the following dates:

- [Section A.1, “December 23, 2005,” on page 23](#)

A.1 December 23, 2005

- Page design reformatted to comply with revised Novell documentation standards.
