DSNlink Version 2.1A Release Notes

These release notes explain the differences between DSNlink Version 2.1 and DSNlink Version 2.1A.

For more information, see the DSNlink Version 2.1 Release Notes, which also apply to this kit.

Documentation Changes

Enhancements for Use With Digital UNIX Version 4.0

Previous Problem: DSNlink Version 2.1 did not run on Digital UNIX Version 4.0 without workarounds.

Current Behavior: DSNlink contains modifications necessary to run on Digital UNIX Version 4.0 without workarounds. Consequently, DSNlink Version 2.1A supercedes DSNlink Version 2.1.

Route Map Entries for Some Customer Support Centers Required Updates

Previous Problem: Customer Support Centers in Holland, Switzerland, and the United States had obsolete route map entries. Consequently, if any of those centers were chosen during the installation procedure, the installation verification procedure (IVP) failed.

Current Behavior: The route map contains the current electronic addresses for all Customer Support Centers. Choosing Support Centers in Holland, Switzerland, or the United States does not cause the IVP to fail.

Documentation Changes

Notice: The HTML files that make up the DSNlink online documentation have Version 2.1 in

document titles instead of DSNlink Version 2.1A. For example, the title of the DSNlink User's Guide is the *DSNlink Version 2.1 User's Guide*.

However, files you can print or display have DSNlink Version 2.1A in the titles. For the names and location of the files, see the Postinstallation chapter of the *DSNlink Version 2.1A Installation Guide*.

Why Are We Telling You This? All online documentation pertains to both DSNlink Version 2.1 and DSNlink Version 2.1A.

To access the online documentation, use the Help Menu or the `dsnhelp` command. To see the DSNlink User's Guide for the interface you choose:

Go to the *DSNlink User's Guide for the Command Line Interface* Table of Contents.

Go to the *DSNlink User's Guide for the DECwindows Motif Interface* Table of Contents.
