## Knowing your Modem

---

*Familiarize yourself with the various parts of your modem. This will be useful during the installation later on.*

**AA:** Auto Answering  
**CD:** Data Carrier Detect  
**RD:** Receive Data  
**SD:** Send Data  
**TR:** Terminal Ready  
**CS:** Clear To Sent  
**OH:** Off Hook

## Installing your Modem

*This section will guide you through the installation of your modem. Just follow the instructions below and you will have your modem installed in minutes.*

Remember to switch off your computer and any connected devices before starting with the installation of your modem.

1. Connect the Male Plug of the Serial Port Cable to the Serial Port Jack on the modem.

2. Connect the Female Plug of the Serial Port Cable to the 9-pin serial port on your computer. (The location of your computer's serial port may differ from the illustration on the next page. Refer to your computer's user guide for the exact location of the serial port.)

If you do not have a 9-pin port free, you would require a 9-to-25-pin converter.

3. Connect a **telephone set** to the Phone Jack on the modem (optional).  
(This connection is optional. It eliminates the need to switch between your telephone set and your modem if they are sharing the same telephone wall socket)

4. Connect one end of the Telephone Extension Cable to the Line Jack on the modem.

5. Connect the other end of the Telephone Extension Cable to a Telephone Jack on the wall.

6. Connect the AC Power Adapter Jack to the Power Jack on the modem.

7. Connect the AC Power Adapter Plug to an electrical outlet.

*(The AC Power Adapter Plug in your modem package may differ from the illustration above. However, the connection procedure is still applicable.)*
