- 2 Make sure that you are logged in as an administrator on the workstation or that you have access to the administrator password (users without administrator rights to the workstation cannot install new software).
- 3 Double-click `setup.exe` in the `C:\Novell\Novell Client 2 SP1 for Windows` directory (created when you unzipped the Novell Client for Windows download file).

Custom Installation: Lets you select additional products to install, including Novell Modular Authentication Services (NMASTM) and Novell International Cryptographic Infrastructure (NICI).
- 7 Follow the on-screen instructions.
- 8 When the installation is complete, reboot the workstation.

USING OPTIONAL PARAMETERS TO INSTALL THE NOVELL CLIENT

Command prompt: Click the *Start* button, type `command prompt` in the *Search* box, then press Enter.
Run dialog box: Click the *Start* button, click *All Programs*, click *Accessories*, then click *Run*.
